Lucas Barroca
Full Stack Developer

Currently, I have been working on various mobile applications, using technologies like Ionic with Capacitor, Angular, TypeScript, PHP Laravel, Node.js, and NestJS, offering a complete full-stack solution that encompasses mobile, web, and APIs.

Together, these applications total a base of approximately 500,000 users, with 350,000 of them in a single app where 250,000 are active.

In recent years, I have faced challenges such as: optimization of queries and databases, data correction, production setup, code refactoring, implementation of various APIs like WhatsApp, SMS, Pagar.me, integration with APIs and tracking systems, development of a proprietary solution for mobile tracking in native Android (Java) connected to Capacitor, complete visual redesign of applications including animations, creation of new apps, among others.

Objective

Work as a developer, whether Full Stack, Frontend or Backend.

Experience

2022 - Today
Simonini Software
simoninisoftware.com.br

Full Stack Developer

I work remotely on complete mobile solutions with app, web and API, in applications that have a base of 500,000 users together.

2016 - 2022
Helparte
Self-employed
